

CDG has recently partnered with EPI Communications Consultants to develop a 2-way API between our MBS solution and EPI's AutoCad based solution. Through this partnership, EPI also offers CDG clients access to EPI's other consulting and engineering services, which includes assistance with your HUBB Reporting and 477 filing support.

- ▶ Contract Administration
- ▶ Construction Management Services

About EPI

EPI Communications Consultants provides value added engineering services to our clients. We begin with the end in mind. We plan the build and build the plan, carefully managing scope, schedule and budget.

Our goal is that our client is never surprised by actual results at the end of a project. We focus on a method of using "building blocks." We build early deliverables with the intent of using them through implementation and then integrating the final product into the client's operations.
