CDG ANNOUNCES 2011 GAINS AND CABS FCC REFORM ENHANCEMENTS

Champaign, IL, May 3, 2012 – Communications Data Group (CDG), veteran provider of telecommunications data and voice billing, mediation and carrier interconnect billing, announces the acquisition of 11 new client contracts during Fiscal Year 2011. With the completion of its annual audit, Bill Oglesby, Chief Financial Officer, noted that the new business resulted in significant revenue increases, including a seven percent gain in CDG's recurring revenue alone.

Mr. Oglesby also stated that the expansion of CDG's client base in 2011 is a notable achievement given the current uncertainty in the industry, and reflects positively on CDG. "The increases in our new business, coupled with the high retention rate of our existing clients," he commented, "indicates that our clients believe we are the best option to help them now and down the road. CDG invests considerable resources in developing systems and services that quickly address mandated modifications. With talented personnel and the active participation of our customer community, CDG is committed to creating progressive products that satisfy customers' daily and extraordinary requirements."

According to Bob LaBonté, Chief Executive Officer, "CDG remains optimistic on the CABS side of the shop due to our history and experience with special access, broadband and wireless backhaul billing. While CDG continues to offer a license model for our products, we have positioned ourselves to address the market realities that suggest an online or service bureau model may be a better option for companies moving forward."

The latest CDG CABS software release includes the ability to apply the mandated PVU (Percent of VOIP Usage) percentage at the Carrier/State level with the ability to apply unique percentages for both originating and terminating traffic. The system is Version 51 C/BOS compliant, has a proven history of revenue assurance, seamless mediation processes, numerous reporting functions, and is deemed 'best-of-breed' by most of the industry's largest carriers.

About CDG: CDG provides smart data solutions: CABS, Billing, Mediation, Customer Care, Plant, Trouble, and Service Activation Manager, E-Care, workflow, financial and facilities management, consulting and hosted services.
