

Interconnect IntraMTA Usage Identification and Billing

All revenue is critical to your telecom's bottom line and CDG is committed to helping you bill for every dollar you earn as a local loop provider. We offer a progressive series of solutions to recover costs, eliminate billing errors, and leverage every available revenue source.

CDG's MTA IQ feature offers your telecom an additional possible source of revenue by correctly identifying and validating terminating IntraMTA usage for billing. ILECs, CLECs, and other providers can generate additional revenue regardless of their current arrangement by activating CDG's MTA usage and audit process.

With the flick of a switch, wireless usage records in which the LRN fields have been populated can be compared with MTA tables to determine the correct jurisdiction of the call. By accurately identifying and billing MTA usage, the IntraMTA Usage module can reduce disputes and produce auditable records, allowing your company to take advantage of an additional source of income. CDG's IntraMTA Usage module has been proven to be effective and reliable, and is currently in use for billing and collecting revenue.

Your telecom provides vital services for carriers across the nation, so make sure that your billing system allows you to record and bill for all relevant charges, reduce revenue leakage and improve profitability. CDG offers you this type of top-of-the-line performance and flexibility with a suite of products that are designed to manage billing issues effectively.

Committed to the continuous development of highly adaptable systems, we focus on the increasing industry demand for automated features that improve revenue management, reduce carrier disputes, and minimize the human workload.

CDG's Elements is the product of choice for reliable, comprehensive Interconnect and BDS/Special Access ordering and billing and offers a full service product line, including data conversion management, integration and records analysis and quantification. We also offer a variety of other services, including:

- Interconnection Agreement, Tariff, and Contract Rate Maintenance
- Record Audits, including Rates, Usage, and Traffic Analysis
- Collection Letters
- User Training

Elements meets the highest industry standards. Ours bills conform to guidelines as established by the Alliance for Telecommunications Industry Solutions for Ordering and Billing Forum (OBTIF) CABS Billing Output Specifications (C/BOS) and Multiple Exchange Carrier Access Bill (MECABS) standards.
